

# Proper Windscreen Maintenance Instructions

## These tips and tricks will help prolong the life of your Windscreen product:

- Check the Windscreen after any high winds or storms for any loose attachments and re-tension those attachments to avoid damage by "wind-whip".
- If severe weather is adamant, remove the windscreen entirely or release the bottom and sides, roll up the panel, and fasten it along the top.
- Visually check the Windscreen for wear and tear and patch holes with Tear-Aid to keep them from enlarging over time.
- Clean the material with a mixture of warm water and soap and hose off windscreen periodically.
- Do not pressure wash or use any cleaning products that contain chlorine or bleach. This may cause discoloration or deterioration.
- If storing for the winter, hose off and dry completely before storage.
- Windscreen should last 5 to 7 years. Review and replace sooner if required.
